RECEIVED

MAR 23 2000

Subject: Keep your jobs and save your Grand Children.

- 1 [Please cease and desist in further nuclear explosions or "sub critical" tests. These are tantamount to making war against your descendants. We all know that when fissionable materials are brought to critical mass they explode. We also know that this disperses the most noxious poisons known. SO QUIT IT !
Thank You All.
- 2 [On a positive note, if you redirect your efforts to solar energy development, there can be enough job creation that everyone in your agency can retain their jobs and many more can be created. How? Please make answering that research problem your new priority. I will be glad to write back and offer my thoughts and support on that problem.
Thanks again..
